                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

                                                                                                                                                                                                                                                                                                                                                                   human.
```

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.G. and de Jong, P.G. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong

BETON OF SEP-2001) Sanger Centre, Hinxton, Cambridgeshire, Callo 18s, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requestEsanger.ac.uk

On Sep 6, 2001 this sequence version replaced gi:14272282.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with a mall overlapping clone, as we submit sequences with This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >- as compressions and repeats: all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PRI 05-SEP-2001

                       Anote—"Organ: brain; Vector: pT7T3-Pac; Site_1: EcoR1; Site_2: Not1; This BB17 cDNA library was generated by subtraction of the BB16 library with 4000 previously sequenced clones. The BB16 library was contributed by the Soares laboratory and it was constructed and normalized as described by Bonaldo, M.F., Lennon, G. and Soares, M.B. (1996), Genome Research 6(9): 791-806. RNA was prepared from dissected brains of adult worker bees of various ages and various behavioral groups. "

(http://www.jax.org/missources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil47321141gblAR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           amplification using primers corresponding to highly conserved sequences of non-structural proteins NS5 and NS4. Products were cloned into pUC18 and expressed in Escherichia coli. NS5 cDNA sequences unique to HCV-4 and HCV-6, and NS4 sequences unique to HCV-5 and the newly discovered HCV-6 are given in AAQ73767-75.

Sequences AAH27132 - AAH27151 represent human gene untranslated regions where the corresponding mRNA fragment has RNA binding protein (RBP) binding activity RBPs mediate the processing of pre-mRNA, the transport of mRNA from the nucleus to the cytoplasm, mRNA stabilisation. translational efficiency, and the sequestration of some mRNAs. Therefore modification of post-transcriptional protein expression in eukaryotic cells may be carried out through the targeting specific interactions of proteins that bind to RBPs. The gene fragments of the invention are used to identify their optimized sub-fragments, compounds that affect RNA/RBP interaction or mRNA functionality; or RBPs that interact with the compounds. Compounds identified using the gene fragments are potentially useful for therapeutic regulation of gene expression, such as in cases of neurodegeneration; metabolic disorders (obesity and diabetes) and bacterial or infilanmaths of the compounds of the content of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        viral infection. The present sequence is one of gene fragments of the invention, isolated from the human beta-2 adrenergic receptor gene.
                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acids that bind RNA-binding proteins or regulate mRNA function, useful for therapeutic gene regulation, such as in cases of neurodegeneration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0

oncogene (MPL) gene, useful for studying the function of and expressing MPL protein for use in screening drugs for treating diseases related to {\sf total}
                                                                                                                                                                                                                                                           The present invention relates to novel single nucleotide polymorphisms (SNPs) in the human myeloproliferative leukaemia virus oncogene (MPL) gene located on chromosome lp34, and methods for haplotyping and/or genotyping the MPL gene. The methods of the invention make use of allele-specific oligonucleotides (ASOs) as probes and primers and/or primer-extension oligonucleotides for detecting MDL gene polymorphisms. The polymucleotides and screened compounds are useful for the treatment of diseases associated with MPL activity, such as congenital amegakaryocytic thromborytopaenia (CAMT). The present sequence represents a reference sequence for human MPL gene exons 9-10. Note: This sequence encodes for only part of the MPL protein shown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; chromosome mapping; gene mapping; gene therapy; forensic;

polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in chaptonstics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amno acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

temperature 50.85 deg. C. Bach pair of primers is: non-cross-hybridising, commends to two distinct segments (separated by at least 400 nt); and generature 50.85 deg. C. Bach pair of primers is: non-cross-hybridising, anneals to two distinct segments (separated by at least 400 nt); and generates a homogeneous population of gene segments in a polymerase chain reaction (PCR). At least one primer in the pair can extend a 3'-end sequence complementary to a template sequence in a DNA polymerase chain sequence complementary to a template sequence in a DNA polymerase craction. The primers are used to amplify segments of the alphalB and beta2 adrenergic receptor genes, particularly to identify genetic variations for diagnosis of disease. Specifically variations in the beta2 darenergic receptor genes, particularly to identify genetic cardiovascular disease (hypertrophy), and those in the beta2 gene with cardiovascular disease, hypertension and asthma, but variations may also be associated with peripheral vascular, pulmonary, neuropsychic and endocrine-metabolic disorders. These primers allow rapid and specific amplification of large and homogeneous gene segments of the alphalB and beta2 genes firm a complex mixture of DNAS. This makes possible detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      is amplified by the primers of the invention. The primers are non-self hybridising; contain at least 15 nucleotides (nt) and has a melting
                                                                                                                          This sequence represents the human beta2-adrenergic receptor gene, and

cardiovascular disorders such as myocardial infarction, unstable angina, hypertension, atherosclerosis and stroke. They are also useful for predicting the likely cardiovascular status of a patient given a creatment regimen comprising administration of cardiovascular drugs confiders to be cardiovascular cardiovascular drugs (e.g., ACE inhibitors, beta-adrenergic receptor antagonists (beta-blockers) one or more polymorphic markers browides a basis for predicting the outcome of a treatment regimen. Fragments of the genes comprising a polymorphic site may be used as primers and probes for detecting genetic polymorphisms or in molecular creaments of the genes comprising a polymorphic pattern reduces or they encode are useful in the screening of potential cardiovascular crucks. Determination of an individual's polymorphic pattern reduces or individual cardiovascular patient. It also provides the ability to climinate patients from chinical trials who are predicted to be non-responsive, or at a risk for an adverse response, to a particular cardiment regimen. Adverse results in an early trial can be evaluated to identify polymorphic patterns so that the adverse results can be evaluated correlated with a sub-population of the test population, permitting decreasing the number of patients required for a patricital population in the proportiate population, therefore the interest of patients required for a patients required the interest of the number of patients required for a patients required the interest of the patients required for a patients required the interest of the patients required for a patient of the patients required for a patient required the interest of patients required for a patients required in the number of patients required for a patient of the patients required for a patient required the patient of the patients required for a patient which is the patients required the patients required fo
The invention relates to a novel method of assessing the cardiovascular status in an individual and to newly identified polymorphisms in the genes encoding angiotensin-converting energyme (ACE), angiotensin II receptor type 1 (ATI) and type 2 (ATI), angiotensinogen (ACT), renin, aldosterone synthase, endothelin receptor type A and beta-adrenergic receptors I and 2. The method comparises determining the sequence at one or more polymorphic positions within these genes, and comparing the pattern of polymorphisms from the individual with a reference polymorphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  decreasing the number of patients required for a clinical trial, which in turn decreases the duration and cost of such trials. The present sequence represents the human beta-adrenergic receptor-2 gene
                                                                                                                                                                                                                                                     pattern obtained from a population of individuals exhibiting a predetermined cardiovascular disease status. The polymorphic markers are useful for determining the predisposition of an individual to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         coding region (GenBank Y00106/g293708). The polymorphic sites identified are 839A/G, 872C/G, 1045A/G, 1284C/T, 1316A/C, 1846C/G, 2032A/G,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a fragment of the C allele of the human beta2 adrenergic receptor (beta2AR) gene, which is located on chromosome the presence of two different alleles, and it has been shown that the presence of two copies of the T allele leads to higher expression of the gene. This is because the polymorphism is found in the 5' leader beta2AR gene. The polymorphism is thought to affect individuals' responses to beta-agonists and beta-antagonists, and is likely to influence their predisposition to asthma, hypertension, congestive heart failure, ischemic heart disease, arrhythmia, obesity, diabetes, vascular disease, premature labour, migraine, anaphylaxis and chronic obstructive pulmonary disease (COPD). The gene can, therefore, be used to predict the susceptibility of an individual to these diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Glucoamylase P; hormoconis resinae; debranching activity; enzyme; dextrinase activity; Trichoderma reesei; starch granule; preservation; hydrolysis; gelatinised starch; glucose syrup; straight linear dextrin; saccharification; lignocellulosic material; sugar utilisation; feed additive; ss.
                                                                                                                                                                                                                                                                                                                                                              Polymorphisms in the leader cistron (LC) of the beta 2-adrenergic receptor (beta 2 AR), useful for predicting genetic disposition to a disease modified by beta 2 AR expression e.g. congestive heart failure,

Hormoconis resinae glucoamylase P, respectively. These sequences are used in the composition of the invention and are capable of being processed by a Trichoderma host cell. H. resinae glucoamylase P has higher debranching and dextrinase activity than conventional glucoamylase-pullulanase mixtures. T. reesel secretes enzymes that are important for the degradation of complexes around and in starch granules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hormoconis resinae glucoamylase P gene construct - for transforming Trichoderma to produce recombinant glucoamylase P \,

starch or the presence of a debranching activity. These applications starch or the presence of a debranching activity. These applications starch or the presence of a debranching activity. These applications include starch analysis, the manufacture of glucose syrups, production of straight linear dextrin for use in food, medicines and cosmetics, and in the preparation of food fibers by the enzymatic treatment of seed husks or brans. The enzyme can also be used as an additive to laundry and dish washing detergents, in wood and textile industry applications such as the preparation of plywood and textile industry applications such as saccharification of plywood adheaves. It can also be used in the saccharification of lignocellulosic materials, the preparation of feedstuff from meat by products and to improve utilisation of sugar present in such feedstuff. When used as a feed additive for food animals, the recombinant bacterial biomass may be added directly to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleic acid sequence represented in AAZ00773"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note= "This nucleotide differs from the wild type
nucleic acid sequence represented in AAZ00773"
replace(934,9)
                                           AAW75777) having an arginine residue at position 16. A novel method for identifying individuals susceptible to adverse responses to regular administration of beta agonists comprises: (a) identifying in a genomic nucleic acid sample from the individual first and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                     comprises determining nucleotide sequences of these portions (e.g. by automated sequence analysis). The invention identifies a known polymorphism in the beta 2-adrenergic receptor gene as being linked
                                                                                                                             second alleles of the beta 2-adrenergic receptor gene, and (b) classifying an individual as susceptible if first and second alleles both encode Arg at residue 16 of the beta 2-adrenergic receptor protein. Beta 2-adrenergic receptor gene alleles may be identified by any known method e.g. denaturing gel electrophoresis or PCR amplification (see also ANV55615-17). Identification preferably comprises amplifying a portion of each allele which includes the sequence encoding residue 16, and optionally also
                   This cDNA sequence codes for human beta-2-adrenergic receptor (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "This nucleotide differs from the wild type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "This nucleotide differs from the wild type

This invention describes novel variant human beta 2-adrenergic receptor gene sequences which have hypotensive, cardiant, neuroprotective and immunosuppressive activity. The products of the invention are used in a method to determine a predisposition for high blood pressure as well as for abnormal blood pressure and other cardiovascular diseases, including myocardial infarction and stroke. Other conditions that can be determined include neuropsychiatric disease, such as depression, anxiety, attention deficit disorder with hyperactivity, eating disorder. Diseases of the autonomous nervous system, e.g. Bradbury-Egglesston, SNy Drager and Riley-Day syndromes having selective noradrenergic-receptor disposition, or migraine, allergic conditions, e.g. asthma and atopic disorders, and metabolic illnesses, e.g. morbid obesity including predicting a change in weight, using body mass index, can also be determined. The beta 2-adrenergic receptor sequence variants can be used to develop therapeutics and/or lifestyle drugs. Individual specific beta 2-radrenergic receptor approach including gene therapy and pharmaceutical intervention therapy. This sequence represents a variant of the wild type human beta 2-adrenergic receptor gene which is represented in AA200773.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
